

Brief summary of vehicle insurance claims procedure

1. Car got into an accident.
2. Owner calls their workshop/insurer to enquire more
3. Owner files a GIA report
4. If owner is at fault, most likely to be done under own damage claims (OD)
5. If determined that owner is not at fault, most likely to be done under third party claims (TP)
6. In both situation, a surveyor appointed by the insurer or workshop will be called.

Fast turnar in repair.
Confided
EV vehicle claims.
Insurer: w / in 3-5 days

OD claims

1. Authorized workshops submit request to panel insurance in regards to the claims
2. Insurance assigns their own surveyor or contracted survey firms to the case
3. Workshops prepare an estimate of the damages while waiting for insurance to respond
4. Surveyors arrive at the workshop and being taking photos, assessing the damages and adjusting the cost
5. Surveyors adjust the cost on the spot and need be request the workshop to disassemble more items to assess further damages and adjust the cost accordingly
6. Car will carry on repairs after assessment
7. After repair, the surveyors will be needed to take the after repair photos to ensure repairs and parts are done or changed as per estimate
8. Owner can collect the car after Step 7.
9. Surveyors will readjust all the cost if needed and submit it back to the insurance
10. Once insurance is happy, insurance will issue the Discharge Voucher to the workshops.
11. After signed by owner, case is closed and workshops gets paid.
12. Surveyors then get paid by insurance for this service.

TP claims (Direct Settlement)

1. Third party workshops submit request to the party at fault insurer

Dashboard. ?
pay now (1 month).
submit.

2. Insurer issues a list of surveyors for TP workshops to choose
3. Most of the time chosen surveyors are sent.
4. Workshops prepare an estimate of the damages while waiting for insurance to respond
5. Surveyors arrive at the workshop and being taking photos, assessing the damages and adjusting the cost
6. Surveyors adjust the cost on the spot and need be request the workshop to disassemble more items to assess further damages and adjust the cost accordingly
7. Car will carry on repairs after assessment
8. After repair, the surveyors will be needed to take the after repair photos to ensure repairs and parts are done or changed as per estimate
9. Owner can collect the car after Step 7.
10. Surveyors will readjust all the cost if needed and submit it back to the insurance
11. Once insurance is happy, insurance will issue the Discharge Voucher to the workshops.
12. After signed by owner, case is closed and workshops gets paid.
13. Surveyors then get paid by insurance for this service.

Direct settlement case does not involve any TP surveyors. It is assumed that cases get processed faster and monies gets paid faster. Not always the case.

TP Claims (Conventional way).

1. Third party workshops inform their appointed lawyers about the case
2. Appointed lawyer submits a Pre Repair Inspection
3. Workshop waits for the third party surveyor and their own surveyor to arrive
4. Workshops can prepare an estimate ^{or surveyor} or allow their own surveyor to come up with the estimate.
5. Both parties ^{separate} surveyors arrive at the workshop and being taking photos, assessing the damages.
6. Both parties surveyors may request the workshop to disassemble more items to assess further damages
7. Car will carry on repairs after assessment
8. After repair, both party surveyors will be needed to take

the after repair photos to ensure repairs and parts are done or changed

9. Owner can collect the car after Step 7.

10. Own party surveyor will readjust all the cost if needed and submit the report to the workshops

11. Workshops submit the report to appointed lawyer and lawyer submits to insurance.

12. Insurance will take the report and get their surveyor to adjust the cost

13. Insurance will inform adjusted cost to the lawyers and lawyers to the workshops

14. Once both parties are agreeable, insurance will issue the Discharge Voucher to the lawyers and lawyer to workshop.

15. After signed by owner, case is closed and workshops gets paid.

16. Own surveyors get paid by workshop for their service.

In this scenario, timeline is longer. But workshops usually get a higher margin because of debating power by the lawyers.

Problems with all claims procedure

1. Time taken to input photos
2. Time taken to input damage items and necessary information
3. Time taken to look for part prices
4. If high volume is involved, most of the time admins needs to be hired to input these and most of the time mistakes always happens.
5. Some cases take months and years to close

2. Specialized Third party claims (conventional method) such as Truck Mounted Attenuator (TMA) (<https://kohkockleong.com/rentals/truck-mounted-attenuator/>)
3. Single Joint Expert reports known as SJE (A Single Joint Expert (SJE) is an expert witness appointed by two or more opposing parties to provide independent evidence in court. The SJE process reduces costs and prevents conflicting expert testimonies. The courts provide procedures to facilitate this appointment during litigation)

SJE procedure

1. Chosen by the workshop or the court
2. Assess reports from insurance and third party surveyors
3. Adjust the cost without prejudice.
4. Courts will usually use the SJE report as a guide to resolve the dispute between insurance and workshops in regards to cost.

Problems faced by Carlink Consultancy

1. Inputting of photos to reports
2. Manual entry of damaged items
3. Manual research on part prices
4. Long and tedious process of report generation
5. Payments from workshops are not met in time

Possible solutions for third party claims report and TMA

1. Data input of owners particulars and etc to be automated by AI from the softcopy or a snapshot of the GIA report
2. Photo taking process to be linked with automated generation of report (Once photos are taken it automatically input itself into the report.
3. AI recognition of damaged items to save input time (minimally 70% right the first time for the start with an aim of 90% accuracy after building up the system with the possibility of extra choices of damaged items for user to select instead of inputting)
4. Part prices to be linked from database and inputted to the report (we may work the part prices from what is given by the workshops and if there is none we may work with the suppliers)
5. Reports are generated at tracked for payments (possibility of a simple accounting tool)

Possible solutions for SJE.

1. Both copies of insurance surveyors and third party surveyors are loaded into the system for comparison
2. Item cost are checked from database and supplier base with the possibility to generate the right item cost.

Summary

As all these reports needs to be signed off by a surveyor, it is still essential that surveyor checks the reports especially for SJE reports.

The plan is to get all this up and running so everything will be efficient and the possibility of a 3 days report generation or less.

When this system takes off, and the company is doing well. The next step is to approach the insurance companies with the possibility of us providing OD claims report and reporting services with transparency as the AI would be able to generate a report of the estimated cost, damages of the vehicle at the point of the insurance reporting photo taking with an accuracy of 80 % with this function in the future frauds will be minimized.
